SUMMARY

B2B customer-facing operator with six years owning the full commercial cycle for a mid-market subscription service — discovery, contract structuring, delivery, renewal, and expansion. Built the account base from zero after the company's original channel collapsed, and held annual churn at ~4% through contract design and operational ownership rather than escalation. Completed a 616-hour Salesforce AI CRM Engineer program in Sep 2026 and certified as a Salesforce Platform Administrator. Moving into customer success to work the same problems at enterprise scale, on systems I previously had to build by hand.

EXPERIENCE

PLANZ COFFEE — Head of Sales & Growth · Seoul 2020 – Mar 2026

Owned sales, marketing, and account management for the company's B2B unmanned-café service after COVID eliminated its original campus channel. Company reached ~200 corporate accounts over this period; I ran new business and account expansion.

- **Expanded a competitor-held account from a 1-year pilot to full replacement.** Doosan Tesna ran a rival system with frequent breakdowns. Rather than demanding removal, I added operational management of their existing units to the proposal, removing switching cost. Entered as a 1-year POC at the Seoan-seong site, then replaced the cafeterias at Pyeongtaek HQ and Anseong — designing each space so the service integrated with the site, which is what made the long-term structure hold.
- **Turned a lost deal into a product change and two new contracts.** Lost Hyundai Motor HQ at final stage; post-mortem showed the competitor was selling an ESG angle through reusable goods, which we had no answer to. I had found the buying organization's real evaluation metric in every other deal and had not done it here. Drove a product update to support tumblers plus a reusable-cup offer, which went into the Amorepacific and LG Electronics wins and into renewal conversations with existing accounts.
- **Changed the product roadmap using customer usage data.** Revenue concentrated in coffee; I hypothesized non-coffee demand in office sites, asked customers for their existing vending sales data, analyzed it, and specified an OEM vitamin-C/taurine drink. It ranked 4th of 21 menu items and took 14% of beverage revenue.
- **Held annual churn at ~4% by designing for it in the contract, not after the fact.** Each installation put over KRW 10M of equipment in ahead of revenue, breaking even at ~8 months on a normal site — but small experimental sites generated almost no beverage consumption while costing the same to fit out. I sized that worst case first and wrote an operating-subsidy clause into the pricing model so the investment was recovered within 1.8 years even there. Across 30–40 contracts a year at typically KRW 0.8–1.0M/month, that clause — not save motions — is what held retention.
- **Ran the pipeline without a CRM for six years.** Built stages (prospect → opportunity → Live) in Trello because Salesforce was out of budget, then migrated to Asana and Relate. Also designed and ran every demand channel solo — direct mail on a target list I built myself, paid, SEO, content, trade shows, seminars, and partner-led.
- **Built and managed a two-person revenue team — a BDR and a CSM — from 2023.** Hiring both roles meant defining the handoffs myself: what qualified a lead well enough to pass on, what the CSM needed at contract signature, and which accounts came back to me. I had run all three seats before splitting them, so the definitions came from having done the work rather than from a template. **Hired both, set their targets, worked accounts alongside them, ran their reviews, and coached them** — the full people-management cycle on a small team rather than a slice of it on a large one.
- **Six-month Product Owner sprint program** (participant; introduced via FuturePlay, working to the CPO of Yeogi Eottae) — carried the leisure & recreation product area through the program. After ten years of deciding alone, this was the first sustained stretch of working to someone else's method.

PLANZ COFFEE — Marketing Director · Seoul 2016 – 2019

- Campus unmanned-café business, working as a two-person team with the CEO on product planning, design, and sales strategy; individual and joint work were not separated in this period. Kyung Hee University co-op adopted the service and referred us onward to the national university co-op association.

GOEUNHAETSAL — Advisor, Business Turnaround (advisory engagement, concurrent) Jan 2024 – May 2026

- Took over the P&L of a loss-making food franchise while the operator stayed on stores and staffing. Renegotiated food-cost and distribution structure, hired a specialist to build company-wide SOPs and implement ERP, restructured tax position and secured policy financing, refinanced debt, and standardized menu and brand across delivery platforms. **Revenue KRW 2.1B → 3.0B, from accumulating losses to 12% operating margin.**
-

CERTIFICATION & EDUCATION

- **Salesforce Certified Platform Administrator** — Aug 2026 · Credential ID 8066536
- **Salesforce AI CRM Engineer Program** — 616 hours, May – Sep 2026. **Selected as Program MVP** among course completers, cited for team communication and helping peers understand the material.
- **CorePress** (FICTIONAL / EDUCATIONAL POC — 6-person team) — **led the team.** Designed the flow across Experience Cloud → Opportunity → Asset → Case → Field Service → reporting with a limited Agentforce scenario, translating the business scenario into Salesforce process. **First prize at final presentation.**
- Tools: Salesforce, Agentforce, SQL, Trello, Asana, Relate, Figma, Sketch, Adobe CC

Kyung Hee University, Seoul — Biology, 2013 – 2018 (coursework completed; degree not conferred) The biology background was used operationally: I built the hygiene SOP and validation system for the unmanned food-and-beverage service.
