SUMMARY

Sales operator who built the operating system for his own revenue function. Designed pipeline stages and migrated tooling three times without budget for a CRM, ran every demand channel solo — including building the outbound target database from scratch — and knows his own unit economics well enough to reconcile ACV, contract mix, and churn against headline numbers. Separately took a loss-making business onto SOPs and ERP until its books could actually be closed. Completed a 616-hour Salesforce AI CRM Engineer program in Sep 2026 and certified as a Salesforce Platform Administrator, moving into sales operations to run these systems properly rather than improvise them.

EXPERIENCE

PLANZ COFFEE — Head of Sales & Growth · Seoul 2020 – Mar 2026

Owned the revenue function — pipeline, demand generation, forecasting, contract structure, and account operations — for a B2B subscription service rebuilt from zero after COVID removed the company's original channel.

- **Designed the pipeline system with no CRM budget.** Defined stages (prospect → opportunity → Live) in Trello, ran the book on it, then evaluated and migrated to Asana and later Relate as volume and reporting needs changed. Salesforce was assessed and ruled out on cost — a call I now understand from the other side.
- **Knows the unit economics of the book, capital included.** 30–40 contracts closed per year at typically KRW 0.8–1.0M/month, largest at KRW 2.5M/month on a two-year term (TCV KRW 60M), against a company base of ~200 corporate accounts over 2020–2026. Each installation put **over KRW 10M of equipment in ahead of revenue**, so break-even averaged **around 8 months** and early termination was the real risk — not churn in the abstract.
- **Modelled the worst site, not the average one, and wrote the floor into the contract.** Revenue came in two layers — subscription plus beverage consumption — and small experimental sites (a 60-person branch office) produced almost no consumption while costing the same in equipment. I sized that case first, then designed an operating-subsidy clause so that even at near-zero consumption the equipment was recovered **within 1.8 years**. Annual churn of ~4% is the output of that clause, not of retention campaigns.
- **Built and ran every demand channel single-handed, and can account for each one.** Direct mail was the early workhorse: with no list to buy, I built the target database from web crawling and government open data, and **1,000 pieces returned roughly 4 contracts**. Paid acquisition brought in Aton, Duksan Neolux and Neptune; Naver SEO, which I optimized myself, brought CJ OliveNetworks; a trade-show booth started the Xi S&D deal. PR I ran as conversion support for the other channels rather than as a source — channels were managed as a mix, not as separate scoreboards.
- **Allocated against cost per acquisition, by channel.** In direct channel spend, KRW 1.25M per contract on direct mail, 2.0M on partner-led, 2.5M on paid. The channel whose list I built myself came in at half the cost of the one I bought.
- **Changed a product decision with customer usage data.** Requested and analyzed customers' existing vending sales data to test a non-coffee demand hypothesis, then specified an OEM product from the result. It ranked 4th of 21 menu items and took 14% of beverage revenue.
- **Created a new internal budget line to unblock a stalled deal.** CJ OliveNetworks was lost in 2024 to an incumbent's termination penalty. I established a sales budget to absorb buyout costs, re-proposed in 2025, and closed 5 of the 8 target units in May 2025 — a structural fix, not a one-off discount.
- **Standardized process and validation for the service.** Authored the hygiene SOP and validation system covering unmanned food-and-beverage operations.
- **Split a one-person revenue function into three seats and defined the handoffs.** Hired and managed a BDR and a CSM from 2023, having personally run prospecting, closing, and retention beforehand. Set the qualification bar for what the BDR passed forward, the handover contents the CSM received at signature, and the rules for which accounts returned to me — the operating definitions a RevOps function owns. **Hired both, set their targets, worked alongside them, ran their reviews, and coached them:** the full management cycle, not a slice of it.
- **Six-month Product Owner sprint program** (participant; introduced via FuturePlay, working to the CPO of Yeogi Eottae) — carried the leisure & recreation product area through the program.

GOREUNHAETSAL — Advisor, Business Turnaround (advisory engagement, concurrent) Jan 2024 – May 2026

- **Put a business without systems onto systems.** Hired a specialist to author company-wide SOPs and implement ERP (ECOUNT), which is what finally made the books closable. Renegotiated food-cost and distribution structure, restructured the tax position, secured policy financing, refinanced debt, optimized delivery-platform mix, and standardized menu and brand. Opened a second location. **Revenue KRW 2.1B → 3.0B; accumulated losses → 12% operating margin.**

PLANZ COFFEE — Marketing Director · Seoul 2016 – 2019

- Campus channel, two-person team with the CEO covering product planning, design, and sales strategy; work was not divided between us in this period.

CERTIFICATION & EDUCATION

- **Salesforce Certified Platform Administrator** — Aug 2026 · Credential ID 8066536
- **Salesforce AI CRM Engineer Program** — 616 hours, May – Sep 2026. **Selected as Program MVP** among course completers.
- **CorePress** (FICTIONAL / EDUCATIONAL POC — 6-person team) — **led the team.** Designed the flow across Experience Cloud → Opportunity → Asset → Case → Field Service → reporting. **First prize at final presentation.**
- Tools: Salesforce, Agentforce, SQL, Trello, Asana, Relate, ERP implementation, Figma, Adobe CC

Kyung Hee University, Seoul — Biology, 2013 – 2018 (coursework completed; degree not conferred)
